

THE MOST DURABLE DOORS ON THE MARKET

Super U

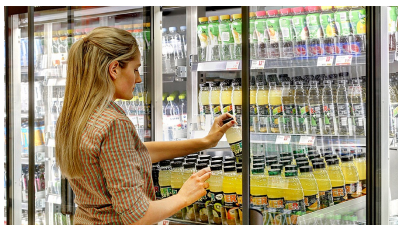

You have a lot to gain by mounting the right doors on your store's fridges. The Super U are glass doors which provide maximal exposure while at the same time saving energy and guarantees safety for both customers and staff. These safety doors have a frame designed for enhanced visibility and decreased risk of collision. The frame also makes sure the argon gas within the doors remain, which guarantees the low R-value of 1,1.

BETTER FOR THE ENVIRONMENT

By installing Super U doors, you will achieve six times the cooling efficiency than with non-insulated glass doors. In other words, it is a smart decision if your focus is on energy costs and environment.

BETTER FOR YOUR CUSTOMERS

Investing in quality feels good even to the touch. The soft-close feature gives a professional feel when the customer opens and closes the doors. The Super U doors are equipped with LED-lights that enhance colours and brands, increasing the impulse to buy!
